ABOUT ME

I am a highly motivated and enthusiastic junior Python developer with a strong passion for programming and problem-solving. During my studies at IT Academy (Sarajevo) and through personal projects, I have gained valuable hands-on experience in developing Python applications.

In addition to Python, I am proficient in JavaScript, HTML, and CSS, enabling me to build interactive and engaging web applications. I enjoy leveraging my skills in front-end technologies to create visually appealing and user-friendly interfaces that enhance the overall user experience.

I am comfortable working with popular frameworks such as Django and React. These frameworks provide a solid foundation for building robust and maintainable web applications. Furthermore, I have a good understanding of database management with SQL, which allows me to develop efficient and optimized database solutions. I am also familiar with NoSQL databases, PostgreSQL and have experience working with technologies like MongoDB.

I am eager to apply my technical expertise, creativity, and dedication to contribute to the success of a forward-thinking company as a junior Python developer.

WORK EXPERIENCE
